

LOG BOOK OF ANGIOGRAPHIC AND INTERVENTIONAL PROCEDURES FOR FRANZCR CANDIDATES

The Royal
Australian and
New Zealand
College of
Radiologists

NAME :

TRAINING INSTITUTION :

DATE COMMENCED :

Interventional Radiological Procedures

Candidates are required to perform 100 angiographic and interventional radiological procedures during their five years of training. Please note, however, that the Education Board does not insist a specific number of each type of procedure be logged. This should include at least some of the following:

- Fine needle and core biopsies of superficial and deep lesions in the chest, abdomen and other areas using a variety of imaging guiding modalities;
- Abscess drainage and biliary procedures using imaging guidance;
- Renal procedures including biopsies, cyst aspirations and nephrostomies;
- Central venous catheter placement using imaging guidance; and
- Angiographic studies including selective and non-selective catheter studies.

A logbook should be kept documenting the type of examination, level of trainee participation and supervision and relevant comments about the examination including follow-up of results or ongoing management of the patient as appropriate. Each patient entry should be signed and dated by the supervising radiologist. A copy of the logbook should be sent to the College Office upon final completion of training.

How to Use Your Log Book

The Log Book has been designed for use prospectively. It makes sense that you can only log a procedure if you have taken an active role in it: just observing a procedure is not sufficient but if your supervising consultant needs to intervene to assist you, the procedure can be logged. It is not necessary to record the exact details of your participation: the Education Board agrees this would be unnecessarily unwieldy.
